Company Profile

Introduction

Global Change is an occurrence impacting on individuals, communities, businesses, governments and society as a whole. Society is both actor and victim of the negative impacts of Global Change. Global Change also provides opportunities for progress and resilience building through technology, innovative thinking, and implementation. We specialize in the analysis of risks and provide innovative and sustainable solutions for increased resilience.

About Us

Our Vision is to increase Global Resilience through cooperation, systems thinking planning and innovative, practical solutions.

Resilience Globale integrates multi-disciplinary and systems planning to find and propose practical solutions for organizations. We have a national and international network of experts with expertise in agricultural and rural development, farmer mentorship, disaster risk and impact assessment, environmental impact assessment, modeling, incident management, and the development of disaster management planning.

Our values are based on honesty, ethical compliance, fairness, firmness, multiculturalism, equality, equity, common sense, participation, respect, cooperation and ubuntu.

Résilience Globale

Résilience Globale Pty Ltd was registered in 2015 by Prof Andries Jordaan, the former Director of the Disaster Management Training and Education Centre for Africa (DiMTEC) at the University of the Free State. He acknowledged the fact that economic growth and global resilience is not in the hands of large organisations such as Universities and multi-national companies. We believe that future economic growth and building resilience is in the hands of small agile entities that can quickly and seamlessly adapt to ever changing challenges. Résilience Globale was established as a Company with a network of national and international experts, which allows it to be agile and adaptable to changing global challenges.

Networks

Our networks of experts have a vast pool of expertise in different disciplines and completed projects in different countries.

We are linked to experts from National Institutions such as:

- University of the Free State
- South African Weather Service
- Mngcunube Developers
- Several National and Provincial line Departments in South Africa
- Research organisations such as ARC & CSIR

Experts from International Institutions include:

- United Nations University – Institute for Environmental and Human Security, Bonn, Germany
- UNCCD, Bonn, Germany
- Freie Universitat Berlin, Germany
- Technische Universitat Dresden, Dresden, Germany
- Public University of Hungary, Budapest, Hungary
- Babas Baloi University, Cluj Napoca, Romania
- Vreie Universiteit Amsterdam, Amsterdam, Netherlands
- University of Niarobi, Nairobi, Kenia
- University of Namibia, Windhoek, Namibia
- National University of Technology, Buluwayo, Zimbabwe

SERVICES

Resilience Globale is a level 4 B-BBEE enterprise that provides professional consultancy and implementation services as follows:

Mentorship for new farmers

Land Reform is a key policy directive from the South African Government with most in agreement that it is an important outcome for future political stability. The balance between political expectations on the one hand and the expectation of food security and sustainable land reform on the other hand is dependent on the successful development and wealth creation of new land reform beneficiaries. Mentorship is a key element of success for any new

farmer. Most successful commercial farmers today were mentored by a parent, a neighbor or an experienced extension officer.

With more than 25 years as extension officer, 20 years practical experience as commercial farmer and rural development specialist as well as 18 years as a scientist at the University of the Free State, Prof Jordaan understands the challenges faced by farmers; large and small. Prof Jordaan, through Résilience Globale leads a team of experienced mentors with more than a combined 100 years practical experience. The Resilience Globale team provides professional mentorship to new farmers that allow farmers to become recognized and successful commercial farmers.

The Mngcunube Developer team of experts are particularly experienced in the provision of livestock improvement support. They successfully assisted thousands of small scale farmers in Lesotho and South Africa. Their results speak for themselves. Read more about them at <https://mngcunube.org/>

Disaster Risk and Vulnerability Assessments

Understanding risk is only possible through the assessment of hazards, exposure and related vulnerabilities and resilience. The Resilience Globale team combined the capitals/assets with relevant hazards for a better understanding of risk. The ten key capitals analysed during the RG risk assessment include (i) social capital, (ii) human capital, (iii) cultural capital, (iv) political capital, (v) institutional capital, (vi) organizational capital, (vii) infrastructure, (viii) economic capital, (ix) environment or ecological capital, and (x) technological capital. Hazards are evaluated based on frequency, intensity and severity while exposure is calculated based on the potential impact.

Resilience Globale make use on contributions and analysis from a multi-disciplinary team of experts and provide results also in a geo-spatial format.

Development of Disaster Management and Related Plans

Disaster Risk Management and Disaster Response plans are key requirements for line departments and all district municipalities. In fact, all government and private organizations should develop mitigation prevention and response plans for any potential extreme event. We

are a team of experts who developed several disaster risk management plans in South Africa and in other African countries.

Training

Our team of experts have more than 100 years of combined expertise in the development and facilitation of short courses. We work with recognized training organizations and provide accredited training on topics such as

- Disaster risk reduction
- Contingency planning
- Incident Command
- Agricultural development
- Farm Management
- Proposal writing
